NimbusLedger backups and disaster recovery

Production RPO is 15 minutes. Production RTO is 4 hours.

Backups are encrypted with the same AES-256 keys as live data and stay in the workspace region (us-east-1 or eu-central-1).

Point-in-time restore covers the last 14 days. Restores older than 14 days are full-backup restores and take longer.

We test a regional failover twice a year. Customers are notified at least 14 days before a planned DR test.

Sandbox is excluded from DR: sandbox workspaces are wiped every Sunday 00:00 UTC and are not restored.

A failed restore that exceeds the 4-hour RTO is treated as a P1 incident.
